Plant Ecology

An international journal

Contents Volume 128, Nos. 1–2, January/February 1997

UV-B and Biosphere
guest editors: J. Rozema, W.W.C. Gieskes, S.C. van der Geijn, C. Nolan and H. de Boois

Preface 1

I. UV-B and aquatic ecosystems

Penetration and effects of solar UV-B on phytoplankton and macroalgae
D.-P. Häder 4–13

UV damage to plant life in a photobiologically dynamic environment: the case of marine phytoplankton
W.W.C. Gieskes & A.G.J. Buma 16–25

Effects of acute and chronic UV-B exposure on a green alga: a continuous culture study using a computer-controlled dynamic light regime
A. Veen, M. Reuvers & P. Ronçak 28–40

Role of ultraviolet-B radiation on bacterioplankton and the availability of dissolved organic matter
G.J. Herndl, A. Brugger, S. Hager, E. Kaiser, I. Obernosterer, B. Reitner & D. Slezak 42–51

Physiological and structural changes in the chloroplast of the green alga *Micrasterias denticulata* induced by UV-B simulation
C. Lütz, H.K. Seidlitz & U. Meindl 54–64

II. UV-B and terrestrial ecosystems: general and methodological aspects

Uses of biological spectral weighting functions and the need of scaling for the ozone reduction problem
M.M. Caldwell & S.D. Flint 66–76

Outdoor supplementation systems for studies of the effects of increased UV-B radiation
A.R. McLeod 78–92

In assessing biological UV-B effects, natural fluctuations of solar radiation should be taken into account
R. Santas, A. Koussoulaki & D.-P. Häder 93–97

III. UV-B and physiology of terrestrial plants

Beneficial effects of enhanced UV-B radiation under field conditions: improvement of needle water relations and survival capacity of *Pinus pinea* L. seedlings during the dry Mediterranean summer
Y. Manetas, Y. Petropoulou, K. Stamatakis, D. Nikolopoulos, E. Levizou, G. Psaras & G. Karabourniotis 100–108

Ultraviolet-B radiation effects on the Mediterranean ruderal *Dittrichia viscosa*
M. Stephanou & Y. Manetas 109–112

Effects of solar UV-B radiation on growth, flowering and yield of central and southern European bush bean cultivars (*Phaseolus vulgaris* L.)
M. Saile-Mark & M. Tevini 114–125

Morphological and physiological responses of bean plants to supplemental UV radiation in a Mediterranean climate
F. Antonelli, D. Grifoni, F. Sabatini & G. Zipoli 127–136

The effect of enhanced ultraviolet-B radiation on germination and seedling development of plant species occurring in a dune grassland ecosystem
M. Tosserams, E. Bolink & J. Rozema 138–147

Leaf thickness and UV-B absorbing pigments of plants in relation to an elevational gradient along the Blue Mountains, Jamaica
J. Rozema, A. Chardonnens, M. Tosserams, R. Hafkenscheid & S. Bruijnzeel 150–159

Reaction of savanna plants from Botswana on UV-B radiation
W.H.O. Ernst, J.W.M. van de Staaij & H.J.M. Nelissen 162–170

The impact of elevated UV-B (280–320 nm) radiation levels on the reproduction biology of a highland and a lowland population of *Silene vulgaris*
J.W.M. van de Staaij, E. Bolink, J. Rozema & W.H.O. Ernst 172–179

IV. Interactions of UV-B with environmental factors

Effects of UV-B radiation on terrestrial plants and ecosystems: interaction with CO_2 enrichment
J. Rozema, G.M. Lenssen, J.W.M. van de Staaij, M. Tosserams, A.J. Visser & R.A. Broekman 182–191

Effects of increasing UV-B radiation and atmospheric CO_2 on photosynthesis and growth: implications for terrestrial ecosystems
J.H. Sullivan 194–206

The combined effects of CO_2 concentration and enhanced UV-B radiation on faba bean
3. Leaf optical properties, pigments, stomatal index and epidermal cell density
A.J. Visser, M. Tosserams, M.W. Groen, G. Kalis, R. Kwant, G.W.H. Magendans & J. Rozema 208–222

Effects of solar ultraviolet-B radiation, temperature and CO_2 on growth and physiology of sunflower and maize seedlings
U. Mark & M. Tevini 224–234

Combined effects of enhanced UV-B radiation and nitrogen deficiency on the growth, composition and photosynthesis of rye (*Secale cereale*)
G. Deckmyn & I. Impens 235–240

V. UV-B and terrestrial ecosystems

Effects of enhanced UV-B radiation and elevated carbon dioxide concentrations on a sub-arctic forest heath ecosystem
D. Gwynn-Jones, J.A. Lee & T.V. Callaghan 242–249

The effects of UV-B radiation on European heathland species
L.O. Björn, T.V. Callaghan, I. Johnsen, J.A. Lee, Y. Manetas, N.D. Paul, M. Sonesson, A.R. Wellburn, D. Coop, H.S. Heide-Jørgensen, C. Gehrke, D. Gwynn-Jones, U. Johanson, A. Kyparissis, E. Levizou, D. Nikolopoulos, Y. Petropoulou & M. Stephanou 252–264

Differential effects of elevated ultraviolet-B radiation on plant species of a dune grassland ecosystem
M. Tosserams, E. Magendans & J. Rozema 266–281

Stratospheric ozone reduction and ecosystem processes: enhanced UV-B radiation affects chemical quality and decomposition of leaves of the dune grassland species *Calamagrostis epigeios*
J. Rozema, M. Tosserams, H.J.M. Nelissen, L. van Heerwaarden, R.A. Broekman & N. Flierman 284–294

The role of interactions between trophic levels in determining the effects of UV-B on terrestrial ecosystems
N.D. Paul, S. Rasanayagam, S.A. Moody, P.E. Hatcher & P.G. Ayres 296–308
